

CONTENT

1 INTRODUCTION	4
2 INTRODUCTION TO SLOPE-DEFLECTION METHOD.....	5
2.1 Slope-Deflection method: Basic concepts and convection marks	5
2.2 The basic equation of the Slope-deflection method	6
2.3 Slope-deflection method solution procedure	7
2.4 Examples of calculation by Slope-deflection method	8
2.4.1 Beams	8
2.4.2 Frame construction without side-sway nodes.....	21
2.4.3 Frame construction with side-sway nodes	35
3 DIRRECT STIFFNESS METHOD.....	59
3.1 Co-ordinate system, sign convention and bar stiffness matrix	59
3.2 Transformation matrices and transformation relations between local and global co-ordinate system	61
3.3 Primary bar load	62
3.4 Direct stiffness method solution procedure	64
3.5 Examples of calculation by direct stiffness method	65
3.5.1 Bars subjected to bending and shear	65
3.5.2 Plane frame constructions	80
3.5.3 Transversely loaded frames and gratings	117
3.5.4 Planar truss structures.....	146
4 STRUCTURES IN CONTACT WITH RESILIENT SUBSOIL	178
4.1 Subsoil models	178
4.2 Beam on resiliently compressible supports	180
4.2.1 Beam on resiliently compressible supports – solution by force method ...	180
4.2.2 Beam on resiliently compressible supports – solution by deformation method	196
4.3 Beam on resilient subgrade	226
4.3.1 Beam on resilient subgrade – Winkler model	226
4.3.2 Beam on resilient subgrade – Pasternak model	248
4.4 Theory of elastic half-space	258
4.4.1 Elastic half-space	258
4.4.2 Elastic half-plane	259
4.4.3 Zhemochkin method.....	261
5. References	277
