

CONTENTS

1	INTRODUCTION	6
2	SPECIFICATION OF THE SUBJECT	7
2.1	Dynamic problem and principle of d'Alembert	7
2.2	Topics of problems that dynamics of structures pay attention to	7
3	CALCULATION MODELS, DEGREES OF FREEDOM AND COORDINATE SYSTEMS	9
3.1	Calculation models	9
3.2	Degrees of freedom	9
3.3	Coordinate systems	10
4	MASS, ELASTIC AND DAMPING PARAMETERS	11
4.1	Mass parameters	11
4.2	Elastic parameters	11
4.3	Damping parameters	15
5	LINEAR AND NONLINEAR VIBRATION	17
6	DYNAMIC LOAD	18
6.1	Deterministic load	18
6.2	Random variable (stochastic) load	18
7	VIBRATION OF SYSTEMS WITH SINGLE DEGREE OF FREEDOM	19
7.1	Natural undamped vibration	19
7.2	Forced undamped vibration	28
7.2.1	Harmonically variable excitation force	28
7.2.2	Periodic excitation force	32
7.2.3	Kinematic excitation	34
7.3	Natural damped vibration	41
7.3.1	Linear damping proportional to the velocity of vibration	41
7.4	Forced damped vibration	45
7.4.1	Harmonically variable excitation force	45
7.5	Tuning of dynamic system	53
7.6	Analogy between bending and rotating vibration	55
7.7	Notation of some quantities in a complex form	55
7.7.1	Possibilities of writing a complex number	55
7.7.2	Expression of natural angular frequency in complex form	56
7.7.3	Frequency response functions	57
8	VIBRATION OF SYSTEMS WITH MULTI DEGREES OF FREEDOM	59
8.1	Free undamped vibration	59
8.1.1	Stiffness constants method	59
8.1.2	Compliance constants method	65
8.1.3	Relationship between stiffness constants method and compliance constants method	68
8.1.4	Orthogonality of natural modes of vibration	69
8.1.5	Normed natural modes of vibration	70

8.1.6	Energy Rayleigh's method	71
8.1.7	Stodola's iterative method	74
8.1.7.1	Calculation of the lowest natural frequencies	75
8.1.7.2	Calculation of the highest natural frequencies	77
8.1.8	Approximate formulas for determining the fundamental natural frequency	77
8.1.9	Solving more complicated systems	79
8.2	Forced undamped vibration	83
8.2.1	Harmonically variable excitation forces	83
8.3	Free damped vibration	86
8.4	Forced damped vibration	87
8.4.1	Method of loads and deflections decomposition according to the natural modes of vibration	88
8.5	Resonance and resonance curves	94
8.5.1	Undamped vibration	94
8.5.2	Damped vibration	94
9	FREE VIBRATION OF STRAIGHT BEAM WITH CONTINUOUSLY DISTRIBUTED MASS	96
9.1	Natural and free transverse undamped vibration of a straight beam	96
9.1.1	Example of solutions for some methods of support	100
9.1.1.1	Simply supported beam	100
9.1.1.2	Beam fixed at both ends	102
9.1.1.3	Cantilever	103
9.1.1.4	Beam at the ends arbitrarily supported	104
9.1.2	Orthogonality of natural modes	106
9.1.3	Free vibration of a prismatic beam with consideration of the effect of shear and moments of inertia	107
9.1.4	Free vibration of a prismatic beam loaded by axial force	109
9.2	Natural and free transverse damped vibrations of a straight beam	112
9.3	Axial undamped vibration of a prismatic beam	113
10	FORCED VIBRATION OF A PRISMATIC BEAM	115
10.1	Forced vibration caused by harmonic movement of end points	115
10.1.1	Beam fixed at both ends	117
10.1.2	Left fixed-end beam	120
10.1.3	Right fixed-end beam	121
10.1.4	Simply supported beam	122
10.1.5	Left fixed cantilever	123
10.1.6	Right fixed cantilever	124
10.1.7	Koloušek's frequency functions	125
10.2	Transverse vibration caused by a continuously time-variable load	127
10.2.1	Transverse damped vibration caused by a uniform harmonically variable load	127
11	KOLOUŠK'S SLOPE DEFLECTION METHOD	128
11.1	Principle of the method	128
11.2	Steady-state forced vibration	131
11.3	Natural vibration	137

12	EFFECTS OF PULSE LOAD	145
12.1	Classification of force pulses	145
12.2	Response of a system with single DOF on a short-term force pulse	146
12.3	Response to the excitation force of a general nature	148
13	EFFECTS OF IMPACT LOAD	150
13.1	Possible approaches to the solution	150
13.2	Classical theory of impact	151
13.2.1	Imperfectly elastic impact on a system with SDOF	152
13.2.2	Ideal inelastic impact on a system with SDOF	154
13.3	Static theory of impact	157
13.3.1	Direct central impact of two spheres	158
13.3.2	Impact of a sphere on a flat wall or slab	159
13.4	Energy theory of impact	161
13.4.1	Longitudinal impact on a bar	161
13.4.2	Transverse impact on a beam	163
13.5	Wave theory of impact	164
13.5.1	Longitudinal waves in a thin bar	164
