CONTENTS

INTRODUCTION 5

1 SECURITY SYSTEMS 7

1.1 The Core Protection Brands 9
1.2 Technical protection disposal from the aspect of space scope 10
1.3 Norms of IAS problem 10

2 INTRUDER ALARM SYSTEMS 13

2.1 The core concepts 13
2.2 System attributes and components 15
2.3 The IAS disposal according to the security level 17
2.4 The IAS output function - signalization 20
2.5 The IAS protection from sabotage 21
2.6 Operational and functional reliability 24
2.7 The IAS centers and their categorization 25
2.8.1 The IAS center activity algorithm 26
2.8.2 The IAS center disposal 30
2.8.3 Data transmission forms among the wireless IAS components 34
2.8.4 Input and output perimeters 36
2.8 Power supply sources 37
2.9 Regulating microprocessor unit 38
2.10 The IAS system control and indication 38
2.11 The IAS supplementary devices 39
2.12 Emergency signal transmission form 45

3 PERIMETER PROTECTION COMPONENTS 47

3.1 Fence violation detection 47
3.1.1 Microphonic cable 48
3.1.2 Capacity cable 49
3.1.3 Wires straint evaluation 49
3.1.4 Electric field evaluation in the fence surroundings 50
3.2 Infrared barriers and gates 51
3.3 Passive infrared detectors for external use (infratelescopes) 53
3.4 Microwave barriers 54
3.5 Microwave detectors 55
3.6 Slot cables 56
3.7 Earth pressure pipes 57
3.8 Optic cable 57

4 COAT PROTECTION COMPONENTS 59

4.1 Mechanical contacts 59
4.2 Magnetic contacts 60
4.3 Vibration detectors 61
4.4 Alarm foils 62
4.5 Wire detectors 62
4.6 Glass breaking detectors 62

5 SPATIAL PROTECTION COMPONENTS 65

5.1 Passive infrared receivers 67
5.2 Ultrasound detectors 74
5.3 Microwave detectors 75
5.4 Dual detectors 76
5.5 Active infrared motion detectors 76

6 SUBJECT PROTECTION COMPONENTS 77

6.1 Seismic detectors 77
6.2 Art objects protection detectors 78
6.3 Capacity detectors 79

7 THE CORE RULES FOR THE DESIGN, INSTALMENT A OPERATION OF THE ESS CENTERS AND THEIR COMPONENTS 81

7.1 The IAS design procedure 81
7.2 The IAS mounting and control procedure 82
7.3 Employees training, testing operation, and IAS commitment 83
7.4 Regular IAS control and service 84

8 MONITORING AND ALARM RECEIVING CENTER (ARC/CPD) 85

8.1 Communication potential 88
8.2 Communication part of ARC/CPD 90
8.2.1 Radio transmission 90
8.2.2 GSM network transmission 91
8.2.3 Telephone lines transmission 91
8.3 Alarm transmission path 92
8.4 Indicating CPD part 94
8.5 Structural and operational CPD system regulations 94
8.6 CPD operation requests 95

9 FIRE ALARM SYSTEMS 97

9.1 Fire detectors 99
9.1.1 Ionization fire alarms 99
9.1.2 Optical smoke and fire detectors 100
9.1.3 Linear optical smoke alarms 100
9.1.4 Linear thermal detectors – thermal cables 101
9.1.5 Compression alarms 101
9.1.6 Press button fire alarms 101
9.1.7 Passive fire infrared and video detectors 102
9.2 FAS centers 102

10 GRAPHIC PART OF PROJECT DOCUMENTATION 105

10.1 Design documentation drawings requirements 105
10.2 Software tools used within IAS design 109

LITERATURE 110
