

Contents

Introduction	1
1 Light as particles	3
1.1 Black body radiation	3
1.2 Photoelectric effect	4
1.3 Compton effect	5
1.4 Problems	6
1.4.1 Problem	6
1.4.2 Problem	6
1.4.3 Problem	6
1.4.4 Problem	7
1.4.5 Problem	7
1.4.6 Problem	7
2 Particles as waves	9
2.1 Louis de Broglie	9
2.2 Davisson-Germer experiment	11
2.3 Heisenberg uncertainty principle	14
2.4 The Bohr model of hydrogen	15
2.5 Problems	18
2.5.1 Problem	18
2.5.2 Problem	18
2.5.3 Problem	19
2.5.4 Problem	19
3 The Schrödinger equation	21
3.1 A path to the Schrödinger equation	21
3.2 Interpretation of the wave function	22
3.3 Expectation values and operators	23
3.4 The time-independent Schrödinger equation	25
4 Two simple quantum systems	27
4.1 Particle in a box	27
4.2 Classical harmonic oscillator	31

4.3	Quantum oscillator	33
4.4	Classical versus quantum oscillators	36
4.5	Mixture of eigenstates	37
4.6	Problems	38
4.6.1	Problem	38
4.6.2	Problem	38
4.6.3	Problem	39
4.6.4	Problem	39
4.6.5	Problem	39
5	Hydrogen atom	41
5.1	Angular momentum	41
5.2	Schrödinger equation for hydrogen atom	45
5.3	Problems	50
5.3.1	Problem	50
5.3.2	Problem	50
5.3.3	Problem	50
5.3.4	Problem	50
5.3.5	Problem	51
5.3.6	Problem	51
5.3.7	Problem	51
6	Spin	53
6.1	Magnetic dipole moment	53
6.2	The spin hypothesis	56
6.3	Stern-Gerlach experiment	58
6.4	Tangled history of spin	59
7	What is a photon?	61
7.1	Photon among the particles of the Standard model	61
7.2	Photon is what we see in the detector	61
7.3	A particle or a wave?	63
7.4	Spin of the photon	67
7.5	Photon as a quantum of electromagnetic field	72
7.6	Problems	74
7.6.1	Problem	74
7.6.2	Problem	75
7.6.3	Problem	75
7.6.4	Problem	75
8	Entangled states	77
8.1	EPR paradox	77
8.2	Bell's inequality	79
A	Spin of the photon	83
