

BOOK CONTENT

Funding and acknowledgement	5
Abbreviations	7
Symbols	9
Figures	11
Tables	17
1. Integrated photonics overview	19
1.1 Data volume explosion	20
1.2 Communication and interconnect technologies	21
1.2.1 Electrical interconnects	22
1.2.2 Optical interconnects	23
1.3 Integrated photonics: foundation for future	26
1.3.1 Silicon microelectronics	26
1.3.2 Photonics integrated circuits	27
1.3.3 Material platforms for integrated photonics	31
1.3.4 Evolution, challenges and opportunities	32
1.4 Book organization	34
References	35
2. Introduction to optical photodetectors	39
2.1 Landscape of detectors for integrated photonics	40
2.1.1 Semiconductor basics	41
2.1.2 Silicon photodetectors	45
2.1.3 III/V photodetectors	46
2.1.4 Germanium photodetectors	47
2.1.5 Germanium-Tin photodetectors	48
2.1.6 Materials beyond standard semiconductors	49
2.2 Photodetector performances	50
2.2.1 Dark-current	50
2.2.2 Dark-current density	50
2.2.3 Photo-responsivity and photo-gain	51
2.2.4 Quantum efficiency	52
2.2.5 Spectral response	52
2.2.6 Photodetector linearity	53
2.2.7 Frequency response and bandwidth	54
2.2.8 Optical power sensitivity	55
2.2.9 Energy consumption	55
2.2.10 Basics of photodetector noise properties	57
References	58
3. Silicon-germanium photodetectors	61
3.1 Photodetector architectures	62
3.1.1 Metal-semiconductor-metal photodetectors	62
3.1.2 PN photodetectors	63
3.1.3 PIN photodetectors	64
3.1.4 Avalanche photodetectors	66
3.1.5 Homo-junction versus hetero-junction devices	68

3.2	Processing methods	69
3.2.1	Germanium growth	70
3.3	Integration strategies	71
3.3.1	Free-space concepts	71
3.3.2	Waveguide integration	71
3.3.3	CMOS process homogenization	72
3.4	Light injection techniques	73
3.4.1	Evanescent light coupling	74
3.4.2	Butt-coupling	75
	References	77
4.	Work methodology: design, fabrication and opto-electrical testing	
4.1	Design of Si-Ge optical photodetectors	81
4.2	Device fabrication	85
4.3	Photodetector testing and characterization	87
4.3.1	Current-voltage characteristics	87
4.3.2	Radio-frequency small-signal measurements	87
4.3.3	Large-signal inspections and assessments	88
	References	90
5.	Low-bias-operated Si-Ge photodetectors	93
5.1	Initial consideration	94
5.2	Current-voltage characteristics	94
5.2.1	Dark currents	94
5.2.2	Photo-responsivity	95
5.2.3	Quantum efficiency	97
5.3	Opto-electrical bandwidth performance	98
5.4	High-speed device operation	101
5.4.1	Eye diagram inspection	101
5.4.2	Optical power sensitivity	102
5.5	Photodetector energy consumption	104
	References	105
6.	Avalanche-operated Si-Ge photodetectors	107
6.1	Initial considerations	108
6.2	Current-voltage properties	108
6.2.1	Dark currents	108
6.2.2	Photo-responsivity and multiplication gain	111
6.3	Device bandwidth	114
6.4	Gain-bandwidth product and excess noise	117
6.5	Device dynamics and power sensitivity	119
6.5.1	Eye diagram inspection of 40 Gbps optical signals	119
6.5.2	Bit-error-rate measurements	120
6.5.3	Theoretical limits of power sensitivities	122
6.6	Lowered energy consumption	124
	References	127
7.	Conclusion and perspectives	129
7.1	Summary	130
